Webex Incoming Calls Not Appearing on Android

Follow these steps in order. After each step, ask someone to place a test call to your Webex number.

1. Update Webex and restart your phone

- Open the **Google Play Store**.
- Search for **Webex** and tap **Update** if available.
- Restart your phone.

2. Check Android permissions and notifications

The easiest route on most Android phones is:

1. Press and hold the **Webex** app icon.
2. Tap **App info** or the ⓘ icon.
3. Tap **Permissions**.
4. Allow:
    - **Microphone**
    - **Camera** if you use video calling
5. Return to **App info** and tap **Notifications**.
6. Turn on **Allow notifications**.
7. If notification categories are shown, make sure **Calls**, **Incoming calls** or **Calling** is enabled.
8. Allow notifications to appear on the **lock screen** and as **pop-ups** if those options are available.

Notifications are normally managed separately from Permissions on current Android versions.

3. Check the notification settings inside Webex

1. Open **Webex**.
2. Tap your **profile picture**.
3. Go to **Settings > Notifications > Calling**.
4. Make sure **Incoming Calls on This Device** is turned on.
5. If your version displays a **Direct calls** setting, select **Don't mute**.
6. Open **Sounds and vibration > Calls** and make sure:
    - **Silence rings** is turned off.
    - A ringtone is selected.
    - **Vibrate** is turned on if required.

Webex may display slightly different options depending on your organisation's calling service and the app version.

4. Allow Webex to run in the background

Android may prevent incoming calls when Webex is restricted to save battery.

1. Press and hold the **Webex** app icon.
2. Tap **App info > Battery** or **App battery usage**.

3. Select **Unrestricted**, or turn on **Allow background usage**.

Additional step for Samsung phones

Go to:

Settings > Battery and device care > Battery > Background usage limits

- Remove Webex from **Sleeping apps** and **Deep sleeping apps**.
- If available, add Webex to **Never auto sleeping apps**.

Using the unrestricted setting may slightly increase battery usage.

5. Allow Webex through Do Not Disturb

On newer Android versions:

1. Go to **Settings > Modes > Do Not Disturb**.
2. Open **Notification filters > Apps**.
3. Add **Webex** as an allowed app.

On some phones, the route is:

Settings > Notifications or **Sound and vibration > Do Not Disturb > Apps/App exceptions**

Alternatively, temporarily turn off **Do Not Disturb** and place a test call.

6. Clear the Webex cache

1. Press and hold the **Webex** app icon.
2. Tap **App info > Storage and cache**.
3. Tap **Clear cache**.
4. Reopen Webex and test an incoming call.

7. Clear Webex storage only if the problem continues

Use this as a final troubleshooting step:

1. Go to **App info > Storage and cache**.
2. Tap **Clear storage** or **Clear data**.
3. Confirm the action.
4. Open Webex and sign in again.
5. Recheck the Webex notification settings in Step 3.

Clearing storage signs you out and resets the app's local settings. It does not delete your Webex account.
